

COMPANY PROFILE

INTRODUCTION

1. Shudh Sustainable Solutions [The Shudh] came forward to solve country's one of major problem i.e. Waste or Rejects. With strong Research & Design Team, autonomous fabrication and manufacturing activities solve major waste of the surroundings. The tech-logistics department of The Shudh is manned by qualified /senior expertise to achieve "ZERO" tolerance.
2. We introduce ourselves as a waste management company, single window solution source of integrated waste management. One of the leading supplier of organic waste associated solutions, machines/plants and its maintenances.
3. The trusted Technology under diversification constituted "**Shudh Sustainable Solutions**" within the vicinity of National Capital city Delhi, India. This facilitates close communication and quick interaction with our end users. This also enables speedy clearance/approvals formalities and timely release of equipment to ensure in time delivery of the Services.

Our Vision

- Our Aim is to make mission "**Clean India Mission**" a success through innovation and expert solutions working towards "**A Green India**".
- To integrate and bridge the relationship of Enterprises and Indian End-users to manage different types of waste more effectively and make uses of modern technology for Integration of waste management.

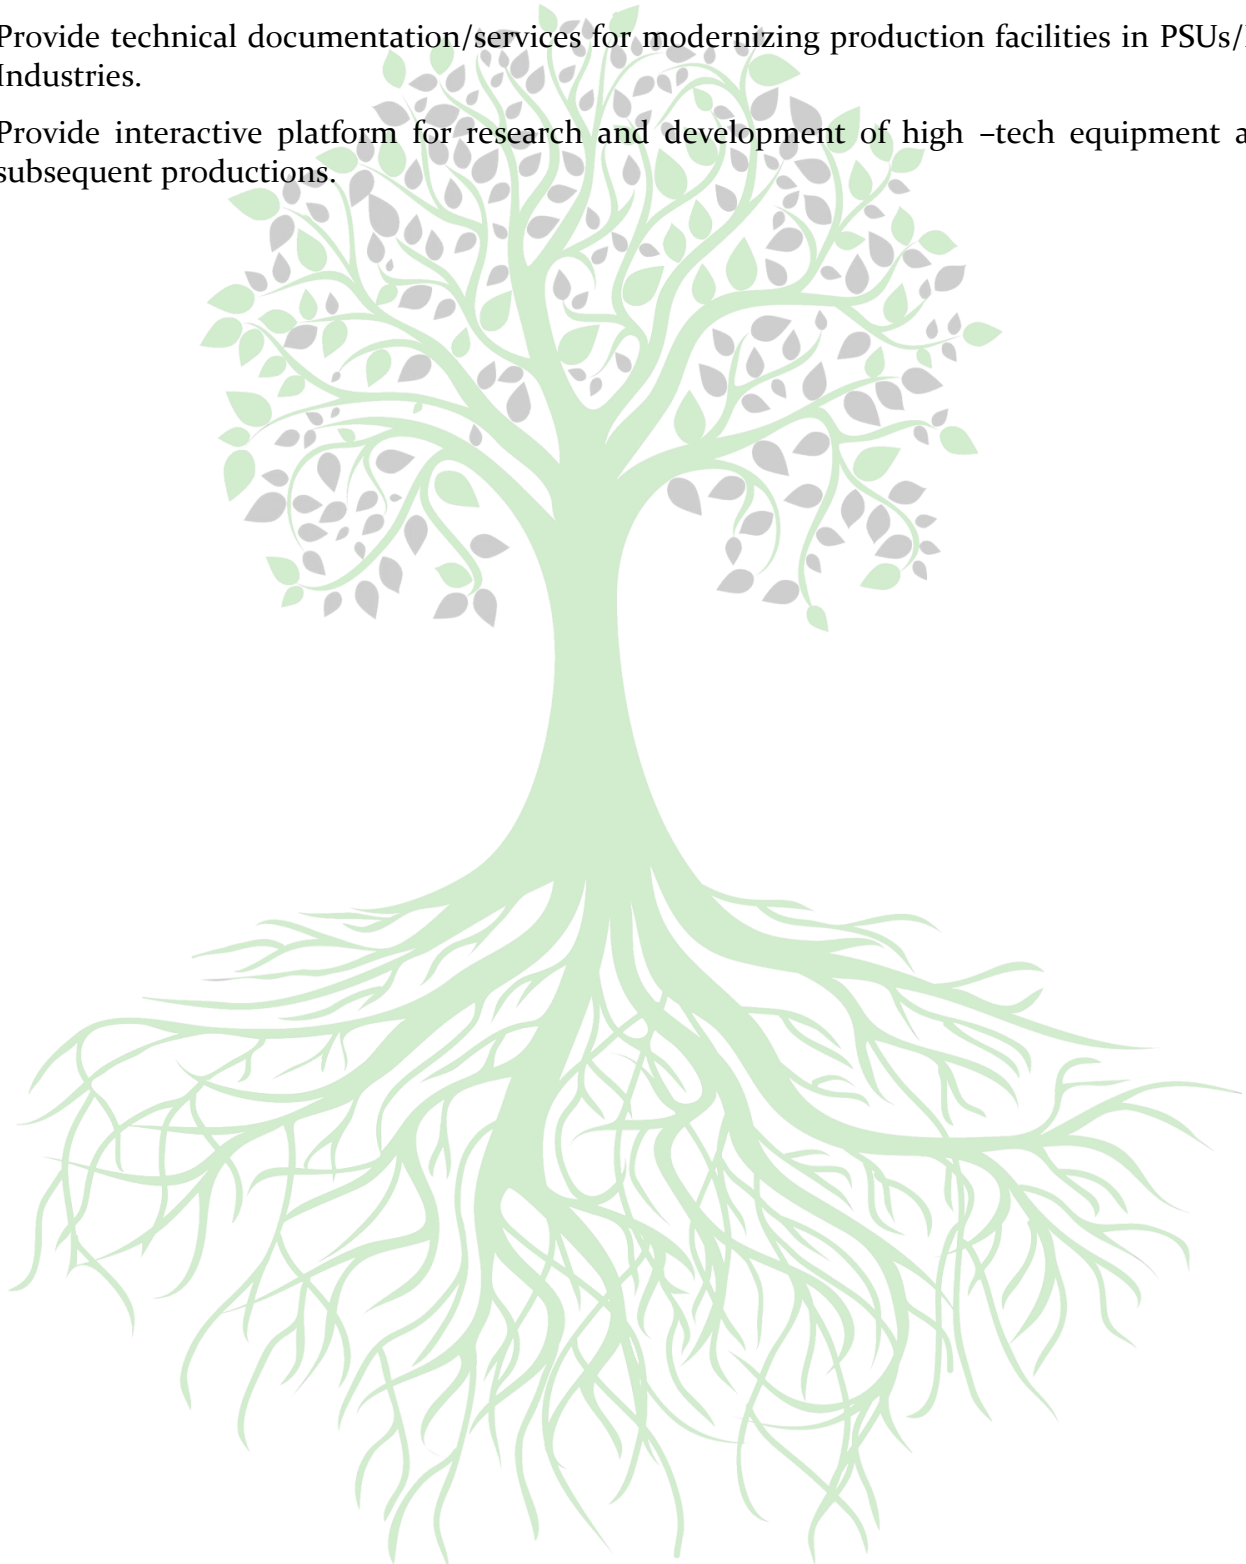

Commitments

The Shudh encompasses of all activities pertaining to Design-development, fabrications, efficiency test, modifications and manufacturing of integrated Waste management systems with quality control and their up-gradations through continual R&D work process for further improvement of efficiency.

- Provide after sale support and warranty service to newly supplied Machine assembly/equipment/aggregates, installation & commissioning.
- Speedy supply of System spare part and allied logistic requirements for smooth implementation of production and maintenance needs.
- Evolve and Implement product indigenization programs for economical products.

- Establish joint ventures between Indian and High technique Foreign Enterprises to achieve self-reliance in field of technology development.
- Provide technical documentation/services for modernizing production facilities in PSUs/Indian Industries.
- Provide interactive platform for research and development of high -tech equipment and its subsequent productions.

About Ourselves

Shudh Sustainable Solutions established in year 2015, after completion of long R&D started autonomous fabrications & manufacturing of decentralized solid waste management solution. This company is a pioneer to innovative idea and converting those ideas into reality by using the skills & knowledge of long experienced, trained for multi technology & systems engineers & technicians the Shudh.

We are Original Equipment Manufacturer (OEM) for **Shudh Waste Processor (SWP)** which is an Organic Waste Composting system and associated spare parts with Quality to provide system on reasonable cost. We are manufacturing and supply genuine / reliable spares parts, assemblies of different type of SWP systems including customized/Standard solution SWP to our end-users.

Our R&D department is dedicating to improve efficiency and make it more economical through better & usable by-products. The by-products such as Bio- manure and energy sticks are highly in demand and a big need of country today. The rejects of gardens are huge in volume. After imposing of restriction of burning & dumping places this SWP is a best option to convert such waste into usable product.

The "SWP's" are customized automatic or semi automatic highly compact designs which process all kind of organic waste into useful output. There are different customized solutions for different organic waste such as horticulture reject model, food reject model, temple reject model etc. We also design and manufacture custom made machines as per customer demand.

Every 'SWP' purchased by our customers around the world, is a huge step toward contributing to a '**Clean & Green Planet**'. Our efforts are just not complete without the co-operation of any of our valuable customers. By developing into a world leader in waste management industry, Shudh Sustainable Solutions aims at providing complete 'Environment and waste management Solutions' to our customers with unparalleled standards under one roof. We are committed to offer our customers world class product and services with distinctive quality and innovation. With constant endeavour of realizing a beautiful green world, where nature and people exist in harmony, we will do our best in putting the interest of our '**CUSTOMER'S FIRST**'.

At this stage we follow the philosophy,

"REDUCE, REUSE & RECYCLE"

FOCUSED AREAS

✓ WASTE MANAGEMENT

❑ ORGANIC COMPOSTING MACHINE

1. Green Waste Solution
2. Flowers waste Solution
3. Food reject/Waste Solution
4. Vegetable & Fruits waste Solution

❑ MEDICAL WASTE MANAGEMENT

❑ E-WASTE

❑ ETP

❑ STP

❑ BIOGAS PLANT

❑ PLASTIC WASTE RECYCLING

✓ ORGANIC PRODUCTS

❑ VEGETABLES & FRUITS

❑ PULSES

❑ DAILY USAGE PRODUCTS

We also provide consultancy and training in all of the above sectors

All of our Products are highly versatile and reliable. Our re-processors are warranted for the period of 12 months against any manufacturing defects and material failure. The high technology converted in to simpler to ensure most effected & economical equipment to handle highly growing problems of Waste disposal in present time.

OBJECTIVE

- Set up a technology base to meet the emerging needs of horticulture, food and vegetable mandies and temples rejects
- Establish series of Joint Venture Companies (JVCs) and collaborations in India with international technology driven firms in specific niche areas
- Modern technology production, quality test accreditation and quality assurance facilities to produce products OEMs to facilitate the end user need
- Provide Technical Support & advice during Evaluation, Installation, Warranty and Post Contract phases including services and repair.
- Installation of plant and give end user after sale services and spare parts

Shudh Sustainable Solutions strive for quality production and dedicated to further improvements in technology. We are also providing technical training of all the system to support skill development program of Government of India, hence providing trained work force to Industry. This technology to manage Organic waste is a need of day when restrictions on waste burn and space sinking for waste dumping /land filling. Our output products are in high demand such as fuel sticks and organic manure.

Project generates substantial funds through output product sale to sustain operations. System operates on three phase electricity and need a platform for Installation. Our team is working pan India.

Let's Be Shudh...!!!
